FEEDING DIRECTIONS

CATTLE: Feed to beef cattle on pasture at the rate of 1 to 4 pounds per head per day. Feeding rate is determined by pasture condition and stage of production of animals. Distribute cubes on ground in order to assure uniform consumption. Provide a source of fresh, clean water at all times.

HORSES: Feed 1 to 2 pounds per head per day to horses on pasture. Provide a source of fresh, clean water at all times.

CAUTION: Changes in feed should be made gradually. Feed should be stored in a well-ventilated, dry area that is protected from rodents and insects. Feed is perishable. Do not feed moldy or insect-infested feed as it may cause illness or death.
