FEEDING DIRECTIONS

Feed 0.75 to 1.5 lb per 100 lb of body weight daily. If you feed by dry measure, periodically weigh the daily feed to ensure the proper amount is being fed. Observe the condition of horse over a period of time and adjust the feeding rate to maintain desired condition. Do not feed free choice. If horse is hot, excited, or ill, delay feeding. Do not allow horse to over-consume or eat rapidly. Provide a source of good quality hay or grazing free choice along with a supply of fresh, clean water.

CAUTION: Feed should be stored in a well-ventilated, dry area protected from rodents and insects. Feed is perishable. Do not feed moldy or insect-infested feed to animals as it may cause illness or death.
